

Stop Being the Integration Layer in Your Own Company

I help growing manufacturers connect sales, orders, production, and fulfillment into one coordinated workflow without heavy ERP rollouts.

Background: Quant + ML (MSc), built automation across fintech and operations.

If this sounds familiar

- The founder or one operator is the escalation point for everything.
- Sales, production, and shipping handoffs live in disconnected silos.
- Orders arrive in inconsistent formats (email, PDFs, spreadsheets).

What I build

Lightweight operational systems that connect your current tools, surface exceptions, and reduce manual handoffs. No rip-and-replace.

- Order intake that turns messy inbound orders into structured data
- Validation against SKUs, pricing rules, and inventory signals
- Exception-first workflow so humans handle only edge cases
- Automatic updates: confirmations, statuses, and audit trails

Typical outcomes

Hours returned weekly	Fewer preventable errors	Clearer ownership across teams
-----------------------	--------------------------	--------------------------------

Outcomes depend on current process and data quality.

The offer

30-minute Operational Bottleneck Diagnostic

- Map one order end-to-end
- Identify the top 3 breakdowns
- Estimate time + error cost
- Decide if automation is worth doing

If there's no meaningful leverage, I'll tell you that directly.
